Isaac Bogoch @BogochIsaac · Sep 10, 2021

...

Canada's National Advisory Committee on Immunization (NACI) has a statement on which immunocompromised individuals should receive a 3rd [#COVID19](#) vaccine.

Defining "immunocompromised" is always challenging.

This looks (mostly) pretty reasonable.

Details: [bit.ly/391KcGM](https://bit.ly/391KcGM)

\*For this recommendation, moderately to severely immunocompromised includes individuals with the following conditions:

- Active treatment for solid tumour or hematologic malignancies
- Receipt of solid-organ transplant and taking immunosuppressive therapy
- Receipt of chimeric antigen receptor (CAR)-T-cell therapy or hematopoietic stem cell transplant (within 2 years of transplantation or taking immunosuppression therapy)
- Moderate to severe primary immunodeficiency (e.g., DiGeorge syndrome, Wiskott-Aldrich syndrome)
- Stage 3 or advanced untreated HIV infection and those with acquired immunodeficiency syndrome
- Active treatment with the following categories of immunosuppressive therapies: anti-B cell therapies (monoclonal antibodies targeting CD19, CD20 and CD22), high-dose systemic corticosteroids (refer to the [Canadian Immunization Guide](#) for suggested definition of high dose steroids), alkylating agents, antimetabolites, or tumor-necrosis factor (TNF) inhibitors and other biologic agents that are significantly immunosuppressive.

Isaac Bogoch @BogochIsaac · Sep 15, 2021

...

Here is Israel's data demonstrating a lower risk of severe #COVID19 infection in those >60 years following a 3rd vaccine dose.

(Note Israel used Pfizer & separated dose 1 & 2 by 21 days. There is likely greater efficacy with longer dose separation)

Link: [bit.ly/3nJUIRO](https://bit.ly/3nJUIRO)

**Table 2. Primary Outcomes of Confirmed Infection and Severe Illness.\***

Outcome	Nonbooster Group	Booster Group	Adjusted Rate Ratio (95% CI)†
Confirmed infection			11.3 (10.4 to 12.3)
No. of cases	4439	934	
No. of person-days at risk	5,193,825	10,603,410	
Severe illness			19.5 (12.9 to 29.5)
No. of cases	294	29	
No. of person-days at risk	4,574,439	6,265,361	

\* Listed are the results of the Poisson regression analysis in participants who received a booster vaccine and in those who did not receive a booster. The booster group includes data that were obtained at least 12 days after receipt of the booster dose.

† The rate ratio is the estimated factor reduction in the rate in the booster group as compared with the rate in the nonbooster group.
